

C-IED Science & Technology

Diverse Environment

Discussion points – C-IED

- Vehicles: single operator 14 hours+ in the cab of a Husky, looking for HMDS GPR images revealing buried munitions
- Multimodal perception within bombsuit
- Ergonomics, to include weight and body mechanics, when operating handheld metal and mine detectors
- Night ops, slow route clearance patrol movement, and diverse (e.g., desert, mountain, village, un-improved roads) environments, in a heavily mined country
